Computer Software industry of India has acquired global recognition. Government of India has recognized it as the sunlight industry of the future. A major factor adversely affecting its growth and country's status as a premier IT outsourcing destination has been the perceived high level of software piracy. This is primarily due to lack of appreciation in recognizing the cost and efforts involved in development of software in which India is a key player. Also, employment losses are another facet of the same problem.

Government of India, in consideration of the above has made special provisions for computer software programmes in our Copyright Act as well as through fiscal measures. Violation of Copyright attracts both the penalty as well as imprisonment. Being the architect as well as the enforcement agency for the Copyright Act, and to ensure India's competitiveness in Global IT market, Government is obliged to observe strict code of conduct of all its Departments and PSUs connected to your Department not to use any pirated software.

In view of the above, we hereby request you to observe a strict discipline in all of your establishments so that only licensed softwares are used to avoid any piracy and Copyright infringement of computer softwares.
